

### About BullsEye:

Founded in 1999 | 99% customer retention rate | Single source for multiple solutions | One invoice

BUSINESS CONCERN:	SOLUTION:
Do you need to keep your guest WiFi securely separated from your business connections?	A built-in firewall supports segmentation and isolation of guest WiFi traffic from private internal networks to further simplify Payment Card Industry Data Security Standard (PCI DSS) compliance.
Are you noticing WiFi connection latency in some or all of your locations?	With the ability to actively monitor and test for latency issues remotely, troubleshooting any connectivity problems becomes a more pro-active versus reactive role for productivity.
Does a portion of your network need to be in compliance with regulatory requirements such as PCI or HIPAA?	Easily and securely segment network traffic (PCI, HIPAA, employee, customer Wi-Fi) with necessary permissions for each.

### Solution Highlights

- 1. Automated WiFi Management**  
Simulate connections to automatically test for latencies, application performance, VoIP call simulation, and validate network readiness
- 2. Automated Troubleshooting**  
Automatically monitors over 300 variables & seamlessly initiates packet capture of anomalies
- 3. Rock Solid Security**  
Access points featuring tri-radio antenna for fast performance and quicker reaction to security violations
- 4. Active Marketing & Data Collection Opportunity**  
Through a customizable UI for Guest network access, you can

### Additional Benefits

- Integrated traffic shaping & QoS
- Built-in firewall protection
- Automatic compilation & easy navigation of connection logs report
- Constant monitoring & protecting of the network
- Multiple AP models to choose from based on size and environment
- Marker Packet™ auto-classification technology
