

About BullsEye:

Founded in 1999 | 99% customer retention rate | Single source for multiple solutions | One invoice

BUSINESS CONCERN:	SOLUTION:
Are you looking for options to help drive network costs down but like the data pipe of MPLS?	SD-WAN can trim network cost by allowing the use of more economical internet connectivity vs. the high cost of MPLS. Our technical consultants evaluate every option available to provide the best solution for your business.
Is your data connectivity meeting your performance expectations? Do you frequently address connectivity issues related to poor performing network applications?	SD-WAN delivers optimized bandwidth usage across the entire organization with continuous network uptime. Complete and simple network visibility for proactive management and problem identification.
Does a portion of your network need to be in compliance with regulatory requirements such as HIPAA & PCI?	SD-WAN allows you to easily segment network traffic (PCI, HIPAA, employee, customer Wi-Fi) with necessary permissions for each.

Solution Highlights

- 1. Technical Analysis**
Our technical consultants identify and understand what network requirements are needed.
- 2. Proposed Solution**
We present solutions and network diagrams to show exactly how the solution will work.
- 3. Project Management**
A dedicated project manager schedules skilled technicians to install the solution.
- 4. Expert Network Center**
Once everything is up and running, we support any network needs from now and into the future.

Additional Benefits

- Zero-touch provisioning and deployment
- Business policy management for packet steering and resource allocation
- Cloud based management and control
- Application performance monitoring
- Partner gateways designed to also protect any VoIP deployments
- Works with new deployments or migrations from MPLS
